-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 17 February 2009.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

### **DETAILED ACTION**

Group 1, claims 1-10 withdrawn from consideration as being nonelected invention, the requirement having been traversed in the reply filed on January 30, 2009 are hereby fully examined along with the elected invention Group 11, claims 11-20 for patentability under 37 CFR 1.104 in view of applicants' response which is persuasive.

This application does not contain an abstract of the disclosure as required by 37 CFR 1.72(b). An abstract on a separate sheet is required. [The abstract in the PCT does not suffice].

The specification has not been checked to the extent necessary to determine the presence of all possible minor errors, e.g., typographical, grammar, idiomatic, syntax and etc. Applicants' cooperations are requested in correcting any errors of which applicants may become aware in the specification.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Steacy (6,558,515) with or without Shinsky (4,358,346)

Steady discloses substantially the apparatus and method/process as claimed. See Fig. 1, and col. 3, lines 38-66 through cols. 4-6. While not positively recited, obviously Steady's pressure differential cells (38, 39) are capable of measuring the concentration of the first component as claimed. Nonetheless, Shinsky teaches measuring/controlling concentration with a differential vapor -pressure transmitter. See col. 5, lines 50-66. To combine the references would have been obvious to one of ordinary skill in the art inasmuch as Steady suggests that the differential may itself be subject to automated control which could be governed by the composition of one of the product streams. See col. 6, lines 26-31.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- a). Koolen discloses a differential vapor pressure cells (dvp cells) for measuring the vapor pressure differences in the system.
- b). Tragut et al discloses the distillation of a ternary feedstream in a dividing wall column.
